Introduction of programming

It’s a process of giving instructions to the computer to perform specific task is called as programming.

Three levels of programming:

1) Binary level programming:

0 and 1

2) Mid/assembly level programming:

3) High level programming :

ex : python, c, c++, java.....etc

introduction of python

Its high level, interpreted, object oriented, indent programming language.

features of python

* easy to learn

* free and opensource

* platform independent

* Huge community support

* vast collection of libraries

* It supports all kind of programming methods

History of python

- Creator: Guido van Rossum
- Development started: December 1989

- First public release: 1991
- Inspired by: ABC programming language
- Name origin: Named after the British comedy show *Monty Python's Flying Circus*, not the snake.

Guido van Rossum developed Python at the Centrum Wiskunde & Informatica (CWI), a research institute in the Netherlands.

His goal was to create a programming language that was easy to read, easy to write, and powerful enough for practical programming.

Different methods of print

- output function in python is print()

  print("good morning")

- name = 'navya'
  age = 22
  print('my name is', name, 'and my age is', age)
- .format()
  name = 'navya'
  age = 22
  print('my name is {} and my age is {}'.format(name, age))
- F-string method
  name = 'navya'
  age = 22
  print(f 'my name is {name} and my age is {age}')
